

7.0 - How to access a web service

INFORMATION

In 7.0 you will be able to use the Execute activity in a workflow to access a web service.

SETUP

1. In **YourSite Explorer**, load the workflow you wish to add a REST Web Service call to.
2. From the toolbox on the right, drag the Execute activity to the location in your workflow that it is needed.
3. Right-click the Execute box and select **New Process** and **Web Service**.
4. Fill in the necessary information for your REST web service.
 - **URI:** The address of the web service.
 - **Web Service Type:** Your options are SOAP or REST.
 - **Username:** fill in the username, if needed to access the web service.
 - **Password:** fill in the password, if needed to access the web service.
5. Click **OK** to save the activity.

NOTE: You can test your web service by filling in the **Parameter** and **Value**, then clicking **Execute**. The Output Mappings will then show the value returned by the REST web service.

APPLIES TO

7.0 I5

Keywords: REST web service execute activity workflow
