

7.X to 8.X side-by-side migration process

INFORMATION

In some cases you may wish to perform a side-by-side migration from an older 7.X server to a new 8.X server. The attached document contains our best practices for doing so, including migration of multimedia content.

NOTE: When performing a side-by-side migration you must ensure that you either use a demo license until you are ready to cut over, or acquire a demo license key for the migration. Do not use your live server's installation key, as the migration to 8 may impact your live server.

APPLIES TO

MiCC 8.X

Keywords: migration side by side
