

MCC - HowTo Archive your Repository files in public folders

INFORMATION

The Replies and Originals folders in the MCC public folder structure can grow quite large over time. One way to keep these folders down in size is to periodically archive them. The attached PowerShell script will take your existing Replies and Originals folders, and back them up, appending a date stamp to their names.

Download the attached file and unzip it to a folder on your exchange server where you can access it in PowerShell. Open the PowerShell console and execute the script.

For more information on executing PowerShell scripts, please see the following article from Microsoft: <http://technet.microsoft.com/en-us/library/ee176949.aspx>

APPLIES TO

MCC 5.7 to 6.0

Keywords: archive backup public folders mcc
