

YSE - Configuring any Classification Codes enables Lifecycle code within the Enterprise service

PROBLEM

Configuring any Classification Codes enables Lifecycle code within the Enterprise service.

INFORMATION

Large sites are recommended to keep Lifecycle reporting disabled unless necessary, as it can cause large resource usage. If your configuration has any classification codes programmed in YourSite Explorer, this code is in use regardless of whether Lifecycles are disabled in the configuration, which could result in excess memory usage from the Enterprise Server service.

APPLIES TO

MiCC 7.1.X.X

Keywords: classification code codes lifecycle enterprise memory use usage large footprint leak
