

## 7.0 - Data summarization fails due to DimDate error

---

### PROBLEM

When summarizing phone data into the database, you encounter an error referencing the DimDate.

### CAUSE

Your database contains a table pre-populated with dates ranging into the future, but it does not extend far enough.

### WORKAROUND

On the SQL server, unzip and run the attached script to add 10 years worth of dates into the table.

**NOTE:** You will need SQL Management Studio installed in order to run this script.

### RESOLUTION

We will be adding this time automatically in release 7.1 and later.

### APPLIES TO

7.0.1.0

**Keywords:** DimDate summarize resummarize
