

HowTo - Add a binding in IIS manager

INFORMATION

To use SSL with a self signed certificate a binding for the port must be added using IIS Manager. Use the following steps:

1. Open the **Internet Information Service (IIS) Manager**.
2. Expand the list at *your PC name*.
3. Expand the list at **Sites**.
4. Right-click **Default Web Site**.
5. From the menu list select **Edit Bindings**.
6. In the *Site Bindings* window select the **Add** button.
7. From the **Type** drop down menu select **https**.
8. In the **IP address** edit box, leave everything **All Unassigned**.
9. In the **Port** edit box enter **443**.
10. From the **SSL certificate** drop down menu select your certificate from and internal or external certificate authority.
11. Click the **OK** button. The **Site Bindings** window should now include your new binding.
12. Click the **Close** button.
13. In the **File** menu select **Exit** to leave the IIS Manager.
14. Restart the IIS service by going to a **Command Prompt** and entering **IISRESET**.
