

MCC 7.1 - Manual configuration to preview Drafts of email messages

INFORMATION

In Version 7.1 we have added a manual configuration to the server which allows Ignite to preview drafts of messages and not just the original. If a draft exists, it will show the word **Draft** in the top left corner to differentiate from the original.

CONFIGURATION

1. Go to **[InstallDir]\CCM\Websites\MCCWa** and locate the **web.config** file.
2. Make a copy of **web.config** as a backup.
3. Open the **web.config** file and find the line:
`<add key="DraftPreview" value="false" />`
4. In order to enable draft previews, change the value to true. It should now look like:
`<add key="DraftPreview" value="true" />`
5. **Save** the file.

NOTE: No service restarts should be required. The MCCWa will pick up this change automatically when it next polls for settings.

APPLIES TO

7.1

Keywords: draft preview email ignite config configuration
