INFORMATION
This article will go through the process of performing an .MSI installation of the Client Component Pack onto a client computer so that you can script the event, if needed.

The individual switches available through MISEXEC.EXE can be found in this Microsoft TechNet article: https://support.microsoft.com/kb/227091
In addition to the MSIEEXEC options, there are a number of switches specific to our installation.

- ENTERPRISEIPADDRESS You must enter the IP address of the Enterprise Server on any installation.

The following options are all true/false values indicating whether the feature should be installed and activated.

- EMPLOYEEPORTAL
- IGNITE
- MANAGEMENT
- NETWORKMONITOR
- REALTIME
- REPORTING
- SALESFORCE
- SCHEDULING
- SOFTPHONE
- TELEWORKER
- YSE

The following example shows a completely silent installation which includes Ignite, Network Monitor, Realtime (Contact Center Client), Reporting (CCMWeb), SalesForce, and Softphone.

```bash
msiexec /i "Client Component Pack.msi" /qn ENTERPRISEIPADDRESS=10.1.1.1
EMPLOYEEPORTAL=FALSE IGNIITE=TRUE MANAGEMENT=FALSE
NETWORKMONITOR=TRUE REALTIME=TRUE REPORTING=TRUE SALESFORCE=TRUE
SCHEDULING=FALSE SOFTPHONE=TRUE TELEWORKER=FALSE YSE=FALSE
```

By changing the /qn to a /qb the installer will show a progress bar, but not request any user interaction.
