

Mitel 3300 software versions lookup

INFORMATION

Starting with Mitel 3300 software build 10.x.x.x our documentation has referred to the software by its MCD version instead. However, when looking up the software version of a media server in YourSite Explorer, it will return the old build number.

The formula for these builds is fairly straight forward. Keeping in mind that we only started referring to the 3300 software by their MCD numbers starting with MCD 4.0 (rev 10). Build numbers starting with 11 would be MCD 5, and 12 would be MCD 6.

The actual build numbers break down as follows:

[Major Release].[Minor Release].[Service Pack].[Cumulative Patch Release]

For example: **10.2.1.13** would be MCD **4.2 SP1** Cumulative Patch **13**.

Below is a table shows examples of what build numbers would correspond to which MCDs.

Software Build	MCD Release Name
11.0.0.X	MCD 5.0
11.0.1.X	MCD 5.0 SP1
11.0.2.X	MCD 5.0 SP2
12.0.0.X	MCD 6.0
12.0.3.X	MCD 6.0 SP3
13.0.0.X	MCD 7.0
13.0.1.X	MCD 7.0 SP1
13.1.0.X	MCD 7.1

APPLIES TO

Mitel 3300 PBX

Keywords: software version build lookup
