

## 7.0 Ignite - Toolbars on multiple monitors

---

### INFORMATION

Windows 8 introduces the ability to have a taskbar on multiple monitors. Ignite does not currently support this feature.

### SYMPTOMS

On the main monitor Ignite will behave in a normal fashion. If you move Ignite to a secondary monitor and then maximize, it will resize to the display and overlap with the task bar. In some cases this will result in the taskbar covering a portion of Ignite (including the buttons along the bottom).

### WORKAROUND

You can work around this issue in a few ways:

- Keep Ignite on the main monitor.
- Do not maximize Ignite on secondary monitors.
- Do not use the feature that enables a taskbar on the secondary monitor.

To disable the multi-monitor taskbar, simply right-click the taskbar and click **Properties**. Then go to the **Taskbar** tab, and uncheck **Show taskbar on all displays**.

### APPLIES TO

Ignite 7.0

**Keywords:** ignite taskbar multiple monitor maximize
